

«Green Motion»...

**ready for
recycling.**

«Green Motion» recyclable tube!

Our «Green Motion» mono tube consists of laminate, over shoulder and a flip-top cap as well as a decoseam band made of pure polypropylene, and can be recycled after use. The sustainable tube offers good barrier properties against hydrogen and oxygen and is therefore ideal for hair, body and dental care products.

Responsible utilization of resources

With our «Green Motion» tube, we have reduced the thickness of the laminate and are therefore saving material even before production begins. The thinner laminate makes it easier to completely empty the tube, without any loss in haptic material quality. The good restoring force of polypropylene ensures the tube remains wrinkle-free.

Premium-quality finishing

Premium-quality finishing

The recyclable tube can be processed in the usual first-class Permapack quality with all printing processes (flexo, screen and digital printing) and a variety of finishing options such as cold- and hot-foil stamping, soft-touch effect, gloss, matte and other lacquers.

Tube variants:

- Diameter: 35, 40 and 50mm
- Thickness: 250-300 μ
- Seam designs: overlapping or decoseam (360° printing)
- Raw material: white, transparent or silver

Good to know

Our «Green Motion» mono tube is certified as recyclable by the cyclos-HTP Institute.
