

New:
up to 8.000 mW/cm²

LED

LED Powerline

AC 820 IC

Max. irradiation intensity: up to 8.000 mW/cm²

Wavelength: 365, 385, 395 and 405 nm

Air cooled

System-Features

- High irradiation power
- Small dimensions
- Low weight
- Different wavelengths available
- Air cooled

Advantages

- Low temperature load
- No heating phase
- Stackable without gap
- IC (Integrated Controller)
- Plug & Play with 48 V

LED Powerline AC 820 IC

LED Powerline AC 820 IC is an air cooled high-performance UV LED array for intermediate curing (pinning), final curing for printing applications as well as curing of varnishes or UV-reactive adhesives and pottings.

LED Powerline AC 820 IC is available in wavelengths of **365/385/395/405 nm** +/- 10 nm. This variety allows to adjust the wavelength perfectly to any application.

Integrated air-cooling guarantees a reliable continuous operation over the whole ambient temperature area, without depending on huge external heat exchangers.

For **larger irradiation widths**, LED Powerlines are stackable **without gap** to any lengths

Special features

- **Integrated controller (IC)**
- Driving and monitoring of each LED segment up to a max. electric power of 400 W
- Monitoring of LED segments regarding short-circuit, interruption and excess temperature
- Analogue dimming of the segments via a 0-10 V-signal
- Optional control panel

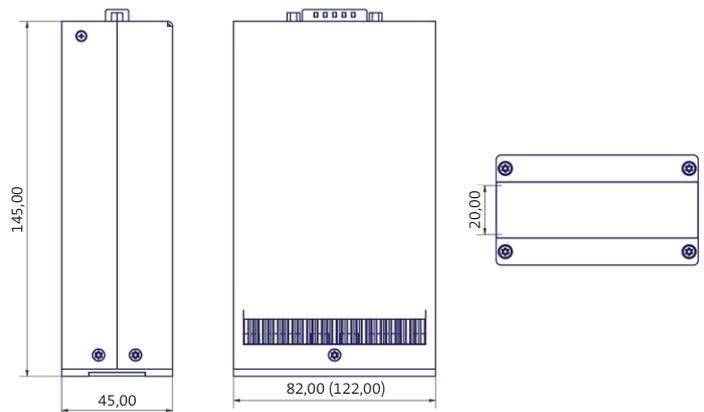

Technical data

|--|---------------------------|-------|-------|-------|
| LED service life | > 20.000 hours* | | | |
| Irradiated area / output window: | 82 x 20 mm or 122 x 20 mm | | | |
| Dimensions in mm: | 82 x 45 x 145 | | | |
| Wavelengths in nm | 365 | 385 | 395 | 405 |
| Typical intensity in mW/cm ² ** | 3.000 | 8.000 | 8.000 | 8.000 |
| Cooling | air cooling | | | |

* typical lifetime under specified operating conditions

** measured with Hönle LED sensor for UV meter

Advantages of LED technology

LEDs **do not emit infrared irradiation**. Thanks to the low temperature load on the substrate, even **heat-sensitive materials** can be irradiated. The **different spectra** guarantee safe and fast curing. As LEDs do not need any warm-up phase, the LED heads can be switched on and off as often as required and they are **immediately ready for operation** at any time. The typical **LED service life is more than 20.000 hours***.
