

ENO®ergo System

ENO®ergo is the REVOLUTION in the hand wrapping market.

The ENO®ergo system is the perfect combination of an **innovative** dispenser and a specially designed **high performance** film.

With ENO®ergo system, **each operator** will achieve a very **high and consistent holding force**. This is not the case with conventional stretch films.

Main advantages:

- Improved ergonomoy for the operators
- Consistent wrapping result, identical for each operator.
- Faster work process
- Reduction of film consumption
- Consistent high holding force.
- Can be supplied with magnets (for fastening on racks, etc.)

The ENO®ergo tool and the ENO®ergo film **perfectly match** together. Together, they only **weigh** a little more than conventional films.

With ENO®ergo, the **operator work constraints are seriously reduced**.

The **strong inside cling** of the ENO®ergo film improves the pallet **stability** and prevents goods from sliding. The **slippery outside** layer of the film allows an easy **un- & loading** of the pallets.

The ENO®ergo system enables a more **efficient** and more **comfortable** wrapping of the bottom of the pallets.

The use of the ENO®ergo system provides a very high and consistent **holding force, independently from the operator**. Pallet after pallet.

For different applications, we offer **3 different types** of ENO®ergo films:

STRONG, REGULAR and LIGHT.

ALSO AVAILABLE IN BLACK AND WHITE
